Foreword	vii
Preface	viii
1. The Knowledge Grid Methodology	
1.1 Towards the Next-Generation Web.	2
1.2 Challenges and Opportunity	4
1.3 Towards the Knowledge Grid	5
1.3.1 Virtual characteristics	6
1.3.2 Social characteristics	6
1.3.3 Adaptive characteristics	7
1.3.4 Semantic characteristics	8
1.4 Epistemology	12
1.5 Ontology	15
1.6 System Methodology	16
1.6.1 The theory of dissipative structure	16
1.6.2 Synergetic theory	17
1.6.3 The hypercycle — a principle of natural self-organization	18
1.6.4 Principles and strategies	20
1.7 Knowledge Management	23
1.8 Definition, Characteristics and Strategies of the Knowledge Grid	25
1.8.1 Definition	25
1.8.2 Parameters.	27
1.8.3 Distinctive characteristics of the Knowledge Grid.	28
1.8.4 The Knowledge Grid's general research issues	29
1.8.5 Difference between the Web and the Knowledge Grid	30
1.8.6 The technological basis of the Knowledge Grid	31
1.8.7 The dream and the strategy	32
2. Semantic Link Network	
2.1 The Idea of Mapping	38
2.2 Overview	40

2.3	Semantic Reasoning Rules	45
2.4	An Algebraic Model of the SLN	47
2.5	SLN Normalization Theory	52
2.5.1	The normal forms of an SLN	52
2.5.2	Operations on SLNs	53
2.6	Criteria, Constraints and Integrity	57
2.6.1	Criteria	57
2.6.2	Constraints and integrity	58
2.6.3	Browsing, execution and reasoning	59
2.6.3.1	Browsing	59
2.6.3.2	Execution and reasoning	60
2.7	SLN Ranking	61
2.7.1	Hyperlink network ranking	61
2.7.2	SLN ranking	62
2.7.3	A ranking algorithm	62
2.8	SLN Operations Implementation	65
2.8.1	Matching between SLNs	65
2.8.2	The union operation	68
2.8.3	SLN reasoning	70
2.9	SLN-based Analogical Reasoning	71
2.9.1	Analogical reasoning modes	72
2.9.2	Process and algorithm of analogical reasoning	76
2.9.3	Comparing reasoning and rank	78
2.10	Dynamic SLNs	79
2.10.1	Representation of a dynamic semantic link	80
2.10.2	Advantages of the dynamic semantic link	80
2.10.3	Constraints on semantic link change	81
2.10.4	Dynamic semantic link reasoning	82
2.10.5	Connectivity	83
2.10.6	A dynamic semantic browser	84
2.11	SLN Abstraction	86
2.11.1	Concept and operation	86
2.11.2	Abstraction, epistemology and ontology	88
2.12	Application 1: SLN-based Image Retrieval	90
2.13	Application 2: Active Document Framework (ADF)	94
2.14	Discussion	96
3.	A Resource Space Model	
3.1	The Virtual Grid	99
3.2	The Resource Space Model (RSM)	100
3.2.1	resource spaces	100
3.2.2	normal forms	104

3.3	Criteria for Designing Resource Spaces	108
3.4	Designing Resource Spaces	110
3.5	Representation of Resource Semantics	111
3.6	The Resource Using Mechanism (RUM)	112
3.7	Comparisons	115
3.8	Extension of the Resource Space Model	119
3.8.1	Formalizing resource space	119
3.8.2	Resource space schemas and normal forms	120
3.8.3	Topological properties of resource spaces	126
3.9	Integrity Constraint for the Resource Space Model	129
3.9.1	Entity integrity constraints	129
3.9.2	The membership integrity constraint	133
3.9.3	Referential integrity constraints	134
3.9.4	User-defined integrity constraints	138
4.	The Single Semantic Image	
4.1	Combining the SLN and the Resource Space Model	141
4.2	The SSeI Mechanism	143
4.3	The Single Semantic Image Query Language	145
4.4	SSeIQL Syntax Specification	148
4.4.1	Syntax for resource space definition	148
4.4.2	Multiple resource space manipulation	150
4.4.3	Resource modification	153
4.4.4	Semantic link space	155
4.4.5	View definition	155
4.5	The Programming Environment	157
4.6	Comparison	159
4.7	The Single Semantic Image Browser	160
4.8	SSeIQL Grammar	166
4.9	The SSeI in a Peer-to-Peer Semantic Link Network	168
4.10	SSeI's Hierarchy, Time and Epistemology	172
5.	Knowledge Flow	
5.1	Definition	174
5.2	A Knowledge Flow Process Model	176
5.3	Peer-to-Peer Knowledge Sharing	178
5.4	Knowledge Intensity	180
5.5	Knowledge Flow Principles	182
5.6	Computational Model of Knowledge Intensity	184
5.6.1	Computing knowledge intensity in a closed environment	184
5.6.2	Computing knowledge intensity in an open environment	186
5.6.3	Knowledge intensity evaluation	187

5.7 Knowledge Spiral Model	188
5.8 Knowledge Flow Network Planning	190
5.8.1 Composition operations and principles	190
5.8.2 Knowledge flow network components	192
5.8.3 The team organization principle	193
5.9 Resource-Mediated Knowledge Flows	194
6. Exploring Scale-Free Network	
6.1 Introduction	196
6.2 The Topologies of Some Real Networks	198
6.2.1 The Internet	199
6.2.2 The World Wide Web	201
6.2.3 Networks of citations of scientific papers	203
6.2.4 Networks of collaboration	205
6.2.5 Networks of human language	208
6.2.6 Other networks	210
6.3 Random Graph Theory	211
6.4 The Small-World Theory	213
6.5 Modeling Measures for Live Scale-Free Networks	216
6.5.1 The Barabási-Albert model	216
6.5.2 Generalizations of the Barabási-Albert model	218
6.5.2.1 Link rewiring	218
6.5.2.2 Node attractiveness	220
6.5.3 The idea of random fraction for Web growth	221
6.5.4 The Krapivsky-Redner model	222
6.5.5 The Simon model	224
6.5.6 An example from software engineering	226
6.5.7 Other growth models with constraints	226
6.5.7.1 Decaying networks	226
6.5.7.2 Aging networks	227
6.5.7.3 Fitness networks	228
6.5.7.4 Age or cost constrained networks	229
6.6 Modeling Actual Scale-Free Network	230
6.6.1 An urn transfer model for a live scale-free network	233
6.6.2 A directed evolving graph for a live scale-free network	238
6.6.3 Experiments and analysis	243
6.6.4 Further consideration and comparisons	247
6.6.5 Proof of the proposition	250
6.7 Summary and Implications	253
